

WHERE DOES YOUR TAN COME FROM?

SUN

1 sextillion photons per second

SCATTERED OFF THE SKY
300 quintillion photons per second

REFLECTED OFF DUST IN THE SOLAR SYSTEM
100 trillion photons per second

 EXTRAGALACTIC BACKGROUND LIGHT
10 billion photons per second

GALAXIES
5 billion photons per second

BLACK HOLES
5 billion photons per second

PLUS...
10 quadrillion photons per second reach us left over from the big bang, however these photons do not contribute to our tan.
